For IMMEDIATE RELEASE

STRATEGIC PARTNERSHIP ADVANCES REDUCTIONS IN FACILITY ENERGY USE
CTRL Systems & Sensor Synergy Announce Strategic Partnership

CTRL Systems, Inc. and Sensor Synergy, Inc. have announced a strategic partnership to provide industrial and commercial organizations with a turn-key energy reduction package. By means of real-time electrical power monitoring and compressed air leakage detection, it is capable of assessing, locating, monitoring, calculating and confirming energy-reduction opportunities in most manufacturing facilities.

Energy reduction should be considered as one of the first steps in reducing facility operating costs. Included in this package is Sensor Synergy's [Watts Aware™ System](#), a low-cost, continuous monitoring system, that identifies electricity costs in equipment such as air compressors. CTRL's [UL101 Ultrasound System](#), finds compressed air and gas leaks that lead to unnecessarily high facility operating costs. Applying both of these technologies provides companies with a proven path to sustained monitoring and sustained savings.

"We are excited to team with Sensor Synergy. Our new energy reduction package can provide a return on investment in less than thirty days, saving our customers tens of thousands of dollars annually," said Bob Roche CEO of CTRL Systems, Inc. "It delivers a complete and continuous picture of the energy usage. We look forward to exploring more monitoring applications with Sensor Synergy."

"I enthusiastically support this partnership. We can provide our customers with a more complete solution that tightly integrates monitoring electrical power use and extremely sensitive air leak detection technology," said James Wiczor, Ph.D., president of Sensor Synergy. "The customer wins big with these two technologies working together, they are both turnkey and easy to deploy."

For more information, contact Sensor Synergy, Inc., 1110 W. Lake Cook Road, Buffalo Grove, IL 60089. Phone: (847) 353-8200; Fax (847) 353-8232. <http://www.sensorsynergy.com/WattsAware.htm>

Note to Editors:

[CTRL Systems, Inc.](#) designs advanced ultrasound technologies for energy reduction, facility maintenance and mechanical machinery reliability. The company also offers *InCTRL*, a condition-based monitoring system, comprised of online analysis software and ultrasound sensors. Services include turnkey technology integration and multi-level onsite training.

[Sensor Synergy, Inc.](#), a U.S.-based engineering company, provides industry with low-cost, easy to deploy, continuous monitoring sensors for tracking real-time electrical power use, energy waste and industrial process monitoring. These patented sensor interfaces and networking technologies provide turnkey systems to make network connections simple.
